Atahan Kılıç

Munich, Germany — atahan.kilc@gmail.com — +49 160 92431692 — GitHub — LinkedIn

Profile

Software Engineer with strong experience in React, TypeScript, Next.js, and React Native (Expo). Experienced in building production-ready web and mobile applications, integrating AI-powered features, and developing distributed systems with high reliability requirements.

Work Experience

Working Student Fullstack Developer *Jul 2026 – Present*
CHECK24 Vergleichsportal GmbH, Munich

- Improving the customer area / aftersales functionality of the CHECK24 Autoteile platform, adding new customer-facing features using PHP, Symfony, React, and SQL.

Working Student Software Developer *Sep 2024 – March 2026*
NextAim GmbH, Munich

- Developed and deployed cross-platform applications (Web, iOS, Android) using React, React Native, TypeScript, Next.js, and Expo, owning deployments and App Store / Play Store releases.
- Built AI-powered chat applications using Next.js and Vercel AI SDK, integrating with an Azure-hosted LLM and improving reliability of chat, document upload, and message handling flows.
- Developed a complex transportation management system with Supabase, focusing on relational data modeling, advanced multi-table filtering, and backend-heavy workflows.
- Implemented secure authentication, role-based access control, and subscription payments using Auth0, AWS Cognito, Supabase RLS, and Stripe.

Software Developer *Aug 2023 – Mar 2024*
HAVELSAN, Ankara

- Developed NATO-standard military messaging and training simulators, ensuring system correctness and reliability.
- Built frontend interfaces using React and Redux Toolkit and backend services with Spring Boot, integrating with a 20+ microservice ecosystem via Kafka.
- Containerized and orchestrated the system using Docker, developing a custom management application to simplify simulator control for non-technical military users.

Candidate Engineer *Nov 2021 – Jul 2023*
HAVELSAN, Ankara

- Designed automated test suites using Java and JUnit, identifying critical edge cases in military communication workflows.
- Developed aviation communication protocol plugins and automated Wireshark plugin generation tools using Java and Lua.
- Implemented real-time embedded software in C++, including interrupt handling and message translation for operational systems.

Projects

BugSense - AI-Assisted UTI Diagnostic Software (SaMD, EU MDR)

- Building on my ongoing thesis, leading the end-to-end redesign of an early-stage implementation into a regulation-ready medical device under IEC 62304 and ISO 14971, covering regulatory analysis, requirements engineering, architecture, and further full-stack implementation and DevOps.
- Authoring the engineering documentation tree: regulatory analysis (MDR, GDPR, EU AI Act), device classification, requirements with end-to-end traceability, and risk-control mapping.
- Designing the service architecture (image acquisition, model inference, audit logging, storage).

Bugsense Landing Page

- Production marketing site for Bugsense - a point-of-care UTI diagnostics platform · GitHub

- Built and shipped a fully static, bilingual landing page with Next.js, TypeScript, Tailwind CSS and next-intl; deployed to GitHub Pages on a custom domain via GitHub Actions.
- Implemented per-locale SEO (metadata, JSON-LD, hreflang, sitemap/robots), client-side locale detection compatible with static export, and a JSON-driven Blog section editable without a CMS.

TATE AI – Teaching Assistant Platform

- Identified and validated a real-world problem in teachers' documentation workflows and translated requirements into a 0→1 AI-powered product.
- Built a full-stack voice-driven system using Expo and Google Gemini API to generate structured lesson, class, and student documentation.
- Field-tested with real users, iterating based on feedback and achieving a high usability score (SUS: 83/100).

DNSi – CHECK24 Collaboration

- Contributed to a DNS monitoring platform, building React/TypeScript components and CI/CD pipelines using GitHub Actions and Docker.

AI Coding Exercises – Eclipse Theia IDE

- Built an AI-powered learning module including interactive chat, automated exercise generation, and context aware code assistance. Contributed directly to the Eclipse Theia open-source project.

Education

M.Sc. Informatics — Technical University of Munich *2024 – Present*

Master's Thesis - BugSense: Deployment-Ready Architecture for an AI-Assisted UTI Diagnostic Device

- Designing an inter-service pipeline that connects on-device acquisition, cloud-based inference, and clinician-facing reporting for a cassette-imaging system.
- Developing a hybrid cloud–local deployment model that balances inference latency, data-residency obligations, and offline-operation constraints common to clinical point-of-care environments.

B.Sc. Computer Engineering — Middle East Technical University *2018 – 2023*

cGPA: 3.71 / 4.00 (equivalent to 1.4 on the German grading scale)

Skills

Frontend & Mobile: React, TypeScript, JavaScript, Next.js, React Native, Expo, Redux TK, Tailwind CSS, Various React UI, Form and Validation Libraries
Backend & APIs: Java, Spring Boot, Node.js, Python, PHP, Symfony, SQL, REST APIs, Webhooks
AI & Product Integration: Vercel AI SDK, Google Gemini API, AI Agent Design
Cloud & DevOps: Docker, Docker Compose, Git, GitHub Actions, Vercel, EAS, Graphana, Sentry
Auth & Payments: Auth0, AWS Cognito, RBAC, Supabase RLS, Stripe
Systems: C, C++, Embedded Systems, Real-Time Programming

Languages

English: C1 (Professional Working Proficiency)
German: A2
Turkish: Native
